

BroadLight Announces Three New Design Wins for its Full FTTH Solution

Vendor Approvals Indicate Renewed Commitment to PON

Ramat Gan, Israel, May 13, 2003– BroadLight, Inc., a leading supplier of communication semiconductors and optical transceivers, announced today that it has recently achieved three new design wins for its end-to-end PON enabling solution that includes burst mode transceivers, PON controllers and software stacks for both Central Office (CO) and Customer Premises Equipment (CPE). The wins confirm BroadLight's commitment to introduce low cost, high performance components and transceivers in order to fuel the PON market.

The new design wins come from Tier 1 equipment vendors that are world leaders in broadband access. In the past few months, an increasing number of leading DSL equipment vendors have taken renewed interest in the evolving FTTH market. More and more vendors are including APON-based FTTH functionality into their product offerings.

“The demand from the carriers to be testing fully functional PON solutions by Q4, has indicated acceleration in the FTTH market”, said Amnon Presler, CEO of BroadLight. “The BroadLight complete component product offering is assisting equipment vendors to meet these challenging targets by reducing time to market in a cost-effective manner.”

BroadLight enables FTTH networks today by delivering end-to-end PON solutions with cost effective, high performance components. When integrated into vendor broadband access systems, these products will simplify, reduce the risk and accelerate the introduction of PON.

BroadLight will be exhibiting the PON components and transceivers at SUPERCOMM, Atlanta, Georgia, June 3-5, 2003 - Booth 10821.

About BroadLight, Inc.

BroadLight delivers cost effective components that enable high performance, end-to-end, easy-to-integrate PON solutions. BroadLight develops standards-based digital, analog and optical communication components, software stacks and algorithms for system vendors who are looking to integrate fully functional, high-performance passive optical network solutions for carriers and service providers. With the highest price/performance in the industry, BroadLight provides the solution that will drive the deployment of FTTH, FTTB and FTTC today. The company is committed to work closely with vendors and carriers to support them throughout the project planning and integration process.
